

herbert zettl video basics pdf

In cinematography, a jib is a boom device with a camera on one end, and a counterweight and camera controls on the other. It operates like a see-saw, but with the balance point located close to the counterweight, so that the camera end of the arm can move through an extended arc. A jib permits the camera to be moved vertically, horizontally, or a combination of the two.

Jib (camera) - Wikipedia
