[Previous page] [Table of Contents] Chapter 11 - Biological Safety Cabinets. Biological safety cabinets (BSCs) provide effective primary containment for work with infectious material or toxins when they are properly maintained and used in conjunction with good microbiological laboratory practices. The various classes and types of BSCs operate under the same basic principles.

A bachelor herd is a herd of (usually) juvenile male animals who are still sexually immature or 'harem'-forming animals who have been thrown out of their parent groups but not yet formed a new family group. It may also refer to a group of males who are not currently territorial or mating with females. Examples include seals, dolphins, lions, and many herbivores such as deer, horses, and elephants.

Introduction to Good Laboratory Practice: history and needs for implementation. The formal concept of "Good Laboratory Practice" (GLP) was launched in the USA, during the 1970s, thanks to constant discussions about the robustness of the non-clinical safety data submitted to the FDA for New Drug Applications (NDA).

A summary of commonly used drug doses is provided in Table 24.1, Table 24.2, Table 24.3, Table 24.4, Table 24.5. These dosages should be used as guidelines, not as firm recommendations. Although guidelines are useful starting points, final determination of optimum doses depends on careful observation of the animal's responses, consideration of experimental needs, and judicious fine tuning.
